

NTE4538B Integrated Circuit CMOS, Dual Precision Retriggerable/ Resettable Monostable Multivibrator

Description:

The NTE4538B is a dual, retriggerable, resettable, monostable multivibrator in a 16-Lead DIP type package. It may be triggered from either edge of an input pulse, and will produce an accurate output pulse over a wide range of widths, the duration and accuracy of which are determined by the external timing components, C_X and R_X . Linear CMOS techniques allow more precise control of output pulse width.

Features:

- $\pm 1.0\%$ (Typ) Pulsewidth Variation from Part to Part
- $\pm 0.5\%$ (Typ) Pulsewidth Variation over Temperature Range
- New Formula: $T = RC$ (T in Seconds, R in Ohms, C in Farads)
- Pulse Width Range – $10\mu s$ to ∞
- Symmetrical Output Sink and Source Capability
- Latched Trigger Inputs
- Separate Latched Reset Inputs
- Quiescent Current (Standby) = $5nA$ /Package (Typ) at $5Vdc$
- $3Vdc$ to $18Vdc$ Operational Limits
- Triggerable from Positive or Negative Going Edge
- Capable of Driving Two Low-Power TTL Loads, One Low-Power Schottky TTL Load or Two HTL Loads Over the Rated Temperature Range
- For Pulse Widths Less Than $10\mu s$, the NTE4525B is Recommended

Absolute Maximum Ratings: (Voltages referenced to V_{SS} , Note 1)

DC Supply Voltage, V_{DD}	-0.5 to +18.0V
Input Voltage (All Inputs), V_{in}	-0.5 to V_{DD} to +0.5V
DC Current Drain (Per Pin), I	10mA
Operating Temperature Range, T_A	-55° to +125°C
Storage Temperature Range, T_{stg}	-65° to +150°C

Note 1. This device contains circuitry to protect the input against damage due to high static voltages or electric fields; however, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit. For proper operation it is recommended that V_{in} and V_{out} be constrained to the range $V_{SS} \leq (V_{in} \text{ or } V_{out}) \leq V_{DD}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either V_{SS} or V_{DD}).

Electrical Characteristics: (Note 2)

Parameter	Symbol	V _{DD} Vdc	-55°C		+25°C			+125°C		Unit

Note 2. Data labeled "Typ" is not to be used for design purposes but is intended as an indication of the device's potential performance.

Note 3. The formulas given are for the typical characteristics only at $+25^\circ\text{C}$.

Operating Conditions:

Parameter	Symbol	V _{DD} Vdc	Min	Typ	Max	Unit
External Timing Resistance	R _X	—	5.0	—	Note 4	kΩ
External Timing Capacitance	C _X	—	0	—	No Limit	pF

Note 4. The maximum usable resistance R_X is a function of the leakage of the capacitor C_X, leakage of the NTE4538B, and leakage due to board layout and surface resistance.
